

**Name** \_\_\_\_\_

**Math Facts Book**  
**Multiplication and Division**

## Vocabulary

When we multiply two numbers, the answer is the \_\_\_\_\_.

$$8 \times 3 = 24 \text{ (24 is the _____.)}$$

Each number that we are multiplying is called a \_\_\_\_\_.

$$36 = 4 \times 9 \text{ (4 and 9 are the _____.)}$$

When we divide two numbers, the answer is the \_\_\_\_\_.

$$7 = 42 \div 6 \text{ (7 is the _____.)}$$

The number we are dividing is called the \_\_\_\_\_.

$$50 \div 5 = 10 \text{ (50 is the _____.)}$$

The number BY which we are dividing is called the \_\_\_\_\_.

$$2 = 16 \div 8 \text{ (8 is the _____.)}$$

---

---

What happens when you multiply by 10? Divide by 10? How do you know when 10 will be the quotient?

# Arrays

Write 2 multiplication sentences that represent the area of this array (the number of squares).

\_\_\_\_\_

Write two division sentences that are related to the multiplication sentences above.

\_\_\_\_\_

Draw an array to represent  $8 \times 4 = 32$ .

Write the turnaround fact for  $8 \times 4 = 32$ . \_\_\_\_\_

Write two division sentences that are related to the multiplication sentences above.

\_\_\_\_\_

Draw one straight line that separates one set of 8 from the others in your array above. What two new multiplication facts are represented by the two parts of this array?

\_\_\_\_\_

# Zeros

Write all of the multiplication facts that match this strategy.

Use turnaround facts also.

Write one division fact that is related to each pair of multiplication facts.

---

---

---

---

---

<hr/>	<hr/>
<hr/>	<hr/>
<hr/>	<hr/>

What do you notice about the last digit in each of the products above?

How can you find a multiple of 5 if you know the multiple of 10?

# Nines

Write the nines fact that you can find by knowing each tens fact below.  
Use turnaround facts also.

Then, write two division facts that are related.

$1 \times 10 = 10$

---

---

---

---

$2 \times 10 = 20$

---

---

---

---

$3 \times 10 = 30$

---

---

---

---

$4 \times 10 = 40$

---

---

---

---

$5 \times 10 = 50$

---

---

---

---

$6 \times 10 = 60$

---

---

---

---

$7 \times 10 = 70$

---

---

---

---

$8 \times 10 = 80$

---

---

---

---

$9 \times 10 = 90$

---

---

---

---

$10 \times 10 = 100$

---

---

---

---

How can you find a multiple of 9 if you know the multiple of 10?

# Squares

Write each squares multiplication fact and the division fact that matches it.

_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____
_____	_____

Draw arrays to represent two of the multiplication facts above.

What do you notice about the length and width of each array?

## Doubles and one more set: Threes

Write the threes fact that you can find by knowing each doubles fact below.  
Use turnaround facts also.

Then, write two division facts that are related.

$1 \times 2 = 2$

---

---

---

---

$2 \times 2 = 4$

---

---

---

---

$3 \times 2 = 6$

---

---

---

---

$4 \times 2 = 8$

---

---

---

---

$5 \times 2 = 10$

---

---

---

---

$6 \times 2 = 12$

---

---

---

---

$7 \times 2 = 14$

---

---

---

---

$8 \times 2 = 16$

---

---

---

---

$9 \times 2 = 18$

---

---

---

---

$10 \times 2 = 20$

---

---

---

---

How can you find a multiple of 3 if you know the multiple of 2? It might help to draw an array to explain.

# Squares and one more set

Write the squares and one more set fact that you can find by knowing each squares fact below. Use turnaround facts also. Then, write two division facts that are related.

$1 \times 1 = 1$

---

---

---

---

$2 \times 2 = 4$

---

---

---

---

$3 \times 3 = 9$

---

---

---

---

$4 \times 4 = 16$

---

---

---

---

$5 \times 5 = 25$

---

---

---

---

$6 \times 6 = 36$

---

---

---

---

$7 \times 7 = 49$

---

---

---

---

$8 \times 8 = 64$

---

---

---

---

$9 \times 9 = 81$

---

---

---

---

$10 \times 10 = 100$

---

---

---

---

Draw an array of one of the squares facts and an array of the squares and one more set fact that matches it. What is the same and different about the two arrays?

## Doubles doubled: fours

Write the fours fact that you can find by knowing each doubles fact below.  
Use turnaround facts also.

Then, write two division facts that are related.

$1 \times 2 = 2$

---

---

---

---

$2 \times 2 = 4$

---

---

---

---

$3 \times 2 = 6$

---

---

---

---

$4 \times 2 = 8$

---

---

---

---

$5 \times 2 = 10$

---

---

---

---

$6 \times 2 = 12$

---

---

---

---

$7 \times 2 = 14$

---

---

---

---

$8 \times 2 = 16$

---

---

---

---

$9 \times 2 = 18$

---

---

---

---

$10 \times 2 = 20$

---

---

---

---

How can you find a multiple of 4 if you know the multiple of 2? It might help to draw an array to explain.

## Two apart facts

Write the two apart fact that you can find by knowing each squares fact below. Use turnaround facts also.

Then, write two division facts that are related.

$1 \times 1 = 1$

---

---

---

---

$2 \times 2 = 4$

---

---

---

---

$3 \times 3 = 9$

---

---

---

---

$4 \times 4 = 16$

---

---

---

---

$5 \times 5 = 25$

---

---

---

---

$6 \times 6 = 36$

---

---

---

---

$7 \times 7 = 49$

---

---

---

---

$8 \times 8 = 64$

---

---

---

---

$9 \times 9 = 81$

---

---

---

---

$10 \times 10 = 100$

---

---

---

---

Draw an array of one of the squares facts and an array of the two apart fact that matches it. How are the two arrays related?

How can you find the product for a two apart fact if you know the squares?

# Facts to Practice

What facts are hard for me to remember?

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## **Answer key On following pages**

Note that some tasks have multiple possible answers.

For example,  $5 \times 6 = 30$  and  $30 = 5 \times 6$  are acceptable as the same answer.

Mathematically speaking, there is no difference between  $5 \times 6 = 30$  and  $6 \times 5 = 30$ .

However, since we want to encourage understanding of the commutative property ("turnaround facts"), these are counted as two different answers in most of the activities.

Also, a "related" division fact means the factors and the product are the same in both facts. For example:  
 $9 \times 5 = 45$  and  $45 \div 5 = 9$  would be "related" facts.

**\*\***Lists of facts that go with a given strategy DO NOT have to be listed in the order in the answer key!! However, turnaround facts should be paired together, and related division facts should be paired together.

## Vocabulary

When we multiply two numbers, the answer is the **product**\_\_\_\_\_.

$$8 \times 3 = 24 \text{ (24 is the product_____.)}$$

Each number that we are multiplying is called a **factor**\_\_\_\_\_.

$$36 = 4 \times 9 \text{ (4 and 9 are the factors_____.)}$$

When we divide two numbers, the answer is the **quotient**\_\_\_\_\_.

$$7 = 42 \div 6 \text{ (7 is the quotient_____.)}$$

The number we are dividing is called the **dividend**\_\_\_\_\_.

$$50 \div 5 = 10 \text{ (50 is the dividend_____.)}$$

The number BY which we are dividing is called the **divisor**\_\_\_\_\_.

$$2 = 16 \div 8 \text{ (8 is the divisor_____.)}$$

# Doubles

In each set of four lines below:  
Write a doubles multiplication fact.

Write its turnaround fact.

Then, write two division facts that are related.

$0 \times 2 = 0$  \_\_\_\_\_

$2 \times 0 = 0$  \_\_\_\_\_

$0 \div 2 = 0$  \_\_\_\_\_

\_\_\_\_\_

$1 \times 2 = 2$  \_\_\_\_\_

$2 \times 1 = 2$  \_\_\_\_\_

$2 \div 2 = 1$  \_\_\_\_\_

$2 \div 1 = 2$  \_\_\_\_\_

$2 \times 2 = 4$  \_\_\_\_\_

\_\_\_\_\_

$4 \div 2 = 2$  \_\_\_\_\_

\_\_\_\_\_

$3 \times 2 = 6$  \_\_\_\_\_

$2 \times 3 = 6$  \_\_\_\_\_

$6 \div 2 = 3$  \_\_\_\_\_

$6 \div 3 = 2$  \_\_\_\_\_

$4 \times 2 = 8$  \_\_\_\_\_

$2 \times 4 = 8$  \_\_\_\_\_

$8 \div 2 = 4$  \_\_\_\_\_

$8 \div 4 = 2$  \_\_\_\_\_

$5 \times 2 = 10$  \_\_\_\_\_

$2 \times 5 = 10$  \_\_\_\_\_

$10 \div 2 = 5$  \_\_\_\_\_

$10 \div 5 = 2$  \_\_\_\_\_

$6 \times 2 = 12$  \_\_\_\_\_

$2 \times 6 = 12$  \_\_\_\_\_

$12 \div 2 = 6$  \_\_\_\_\_

$12 \div 6 = 2$  \_\_\_\_\_

$7 \times 2 = 14$  \_\_\_\_\_

$2 \times 7 = 14$  \_\_\_\_\_

$14 \div 2 = 7$  \_\_\_\_\_

$14 \div 7 = 2$  \_\_\_\_\_

$8 \times 2 = 16$  \_\_\_\_\_

$2 \times 8 = 16$  \_\_\_\_\_

$16 \div 2 = 8$  \_\_\_\_\_

$16 \div 8 = 2$  \_\_\_\_\_

$9 \times 2 = 18$  \_\_\_\_\_

$2 \times 9 = 18$  \_\_\_\_\_

$18 \div 2 = 9$  \_\_\_\_\_

$18 \div 9 = 2$  \_\_\_\_\_

$10 \times 2 = 20$  \_\_\_\_\_

$2 \times 10 = 20$  \_\_\_\_\_

$20 \div 2 = 10$  \_\_\_\_\_

$20 \div 10 = 2$  \_\_\_\_\_

What do you notice about the products above? Why does this happen?

The products are all even. This is because each double is like adding the factor twice, and when we do this, each number has a partner. (or something to this effect)

# Tens

In each set of four lines below:  
Write a tens multiplication fact.

Write its turnaround fact.

Then, write two division facts that are related.

$0 \times 10 = 0$  \_\_\_\_\_

$10 \times 0 = 0$  \_\_\_\_\_

$0 \div 10 = 0$  \_\_\_\_\_

\_\_\_\_\_

$1 \times 10 = 10$  \_\_\_\_\_

$10 \times 1 = 10$  \_\_\_\_\_

$10 \div 10 = 1$  \_\_\_\_\_

$10 \div 1 = 10$  \_\_\_\_\_

$2 \times 10 = 20$  \_\_\_\_\_

$10 \times 2 = 20$  \_\_\_\_\_

$20 \div 10 = 2$  \_\_\_\_\_

$20 \div 2 = 10$  \_\_\_\_\_

$3 \times 10 = 30$  \_\_\_\_\_

$10 \times 3 = 30$  \_\_\_\_\_

$30 \div 10 = 3$  \_\_\_\_\_

$30 \div 3 = 10$  \_\_\_\_\_

$4 \times 10 = 40$  \_\_\_\_\_

$10 \times 4 = 40$  \_\_\_\_\_

$40 \div 10 = 4$  \_\_\_\_\_

$40 \div 4 = 10$  \_\_\_\_\_

$5 \times 10 = 50$  \_\_\_\_\_

$10 \times 5 = 50$  \_\_\_\_\_

$50 \div 10 = 5$  \_\_\_\_\_

$50 \div 5 = 10$  \_\_\_\_\_

$6 \times 10 = 60$  \_\_\_\_\_

$10 \times 6 = 60$  \_\_\_\_\_

$60 \div 10 = 6$  \_\_\_\_\_

$60 \div 6 = 10$  \_\_\_\_\_

$7 \times 10 = 70$  \_\_\_\_\_

$10 \times 7 = 70$  \_\_\_\_\_

$70 \div 10 = 7$  \_\_\_\_\_

$70 \div 7 = 10$  \_\_\_\_\_

$8 \times 10 = 80$  \_\_\_\_\_

$10 \times 8 = 80$  \_\_\_\_\_

$80 \div 10 = 8$  \_\_\_\_\_

$80 \div 8 = 10$  \_\_\_\_\_

$9 \times 10 = 90$  \_\_\_\_\_

$10 \times 9 = 90$  \_\_\_\_\_

$90 \div 10 = 9$  \_\_\_\_\_

$90 \div 9 = 10$  \_\_\_\_\_

$10 \times 10 = 100$  \_\_\_\_\_

\_\_\_\_\_

$100 \div 10 = 10$  \_\_\_\_\_

\_\_\_\_\_

What happens when you multiply by 10? Divide by 10? How do you know when 10 will be the quotient?

When you multiply by 10, the product looks like the factor (not 10) with an extra 0 at the end.

When you divide by 10, the quotient looks like the dividend without a 0 at the end.

You know that 10 will be the quotient when the divisor looks like the dividend without a 0 at the end.

# Arrays

Write 2 multiplication sentences that represent the area of this array (the number of squares).

$$7 \times 3 = 21 \underline{\hspace{2cm}} \quad 3 \times 7 = 21 \underline{\hspace{2cm}}$$

Write two division sentences that are related to the multiplication sentences above.

$$21 \div 7 = 3 \underline{\hspace{2cm}} \quad 21 \div 3 = 7 \underline{\hspace{2cm}}$$

Draw an array to represent  $8 \times 4 = 32$ .

Write the turnaround fact for  $8 \times 4 = 32$ .  $4 \times 8 = 32 \underline{\hspace{2cm}}$

Write two division sentences that are related to the multiplication sentences above.

$$32 \div 8 = 4 \underline{\hspace{2cm}} \quad 32 \div 4 = 8 \underline{\hspace{2cm}}$$

Draw one straight line that separates one set of 8 from the others in your array above. What two new multiplication facts are represented by the two parts of this array?

$$3 \times 8 = 24 \text{ or } 8 \times 3 = 24 \quad 1 \times 8 = 8 \text{ or } 8 \times 1 = 8$$

# Zeros

Write all of the multiplication facts that match this strategy.

Use turnaround facts also.

Write one division fact that is related to each pair of multiplication facts.

$$0 \times 0 = 0 \underline{\hspace{2cm}} \quad \underline{\hspace{2cm}}$$
$$\underline{\hspace{4cm}}$$

$$1 \times 0 = 0 \underline{\hspace{2cm}} \quad 0 \times 1 = 0 \underline{\hspace{2cm}}$$
$$0 \div 1 = 0 \underline{\hspace{2cm}}$$

$$2 \times 0 = 0 \underline{\hspace{2cm}} \quad 0 \times 2 = 0 \underline{\hspace{2cm}}$$
$$0 \div 2 = 0 \underline{\hspace{2cm}}$$

$$3 \times 0 = 0 \underline{\hspace{2cm}} \quad 0 \times 3 = 0 \underline{\hspace{2cm}}$$
$$0 \div 3 = 0 \underline{\hspace{2cm}}$$

$$4 \times 0 = 0 \underline{\hspace{2cm}} \quad 0 \times 4 = 0 \underline{\hspace{2cm}}$$
$$0 \div 4 = 0 \underline{\hspace{2cm}}$$

$$5 \times 0 = 0 \underline{\hspace{2cm}} \quad 0 \times 5 = 0 \underline{\hspace{2cm}}$$
$$0 \div 5 = 0 \underline{\hspace{2cm}}$$

$6 \times 0 = 0$  \_\_\_\_\_  $0 \times 6 = 0$  \_\_\_\_\_

$0 \div 6 = 0$  \_\_\_\_\_

$7 \times 0 = 0$  \_\_\_\_\_  $0 \times 7 = 0$  \_\_\_\_\_

$0 \div 7 = 0$  \_\_\_\_\_

$8 \times 0 = 0$  \_\_\_\_\_  $0 \times 8 = 0$  \_\_\_\_\_

$0 \div 8 = 0$  \_\_\_\_\_

$9 \times 0 = 0$  \_\_\_\_\_  $0 \times 9 = 0$  \_\_\_\_\_

$0 \div 9 = 0$  \_\_\_\_\_

$10 \times 0 = 0$  \_\_\_\_\_  $0 \times 10 = 0$  \_\_\_\_\_

$0 \div 10 = 0$  \_\_\_\_\_

What do you notice about the products above? Why does this happen?

The products are all 0. This is because we are finding groups of nothing, or no groups of some number.

Why can we only write one division fact in each set?

We cannot divide by 0. (If we tried to, it would be like sharing some number among 0 groups, or finding out how many times 0 would go into that number. We can't do this! If  $7 \div 0 = 0$ , then  $0 \times 0$  would be 7. If  $7 \div 0 = 7$ , then  $7 \times 0$  would be 7. Impossible!)

# Ones

In each set of four lines below:  
Write a ones multiplication fact.

Write its turnaround fact.

Then, write two division facts that are related.

$0 \times 1 = 0$  \_\_\_\_\_

$1 \times 0 = 0$  \_\_\_\_\_

$0 \div 1 = 0$  \_\_\_\_\_

\_\_\_\_\_

$1 \times 1 = 1$  \_\_\_\_\_

\_\_\_\_\_

$1 \div 1 = 1$  \_\_\_\_\_

\_\_\_\_\_

$2 \times 1 = 2$  \_\_\_\_\_

$1 \times 2 = 2$  \_\_\_\_\_

$2 \div 1 = 2$  \_\_\_\_\_

$2 \div 2 = 1$  \_\_\_\_\_

$3 \times 1 = 3$  \_\_\_\_\_

$1 \times 3 = 3$  \_\_\_\_\_

$3 \div 1 = 3$  \_\_\_\_\_

$3 \div 3 = 1$  \_\_\_\_\_

$4 \times 1 = 4$  \_\_\_\_\_

$1 \times 4 = 4$  \_\_\_\_\_

$4 \div 1 = 4$  \_\_\_\_\_

$4 \div 4 = 1$  \_\_\_\_\_

$5 \times 1 = 5$  \_\_\_\_\_

$1 \times 5 = 5$  \_\_\_\_\_

$5 \div 1 = 5$  \_\_\_\_\_

$5 \div 5 = 1$  \_\_\_\_\_

$6 \times 1 = 6$  \_\_\_\_\_

$1 \times 6 = 6$  \_\_\_\_\_

$6 \div 1 = 6$  \_\_\_\_\_

$6 \div 6 = 1$  \_\_\_\_\_

$7 \times 1 = 7$  \_\_\_\_\_

$1 \times 7 = 7$  \_\_\_\_\_

$7 \div 1 = 7$  \_\_\_\_\_

$7 \div 7 = 1$  \_\_\_\_\_

$8 \times 1 = 8$  \_\_\_\_\_

$1 \times 8 = 8$  \_\_\_\_\_

$8 \div 1 = 8$  \_\_\_\_\_

$8 \div 8 = 1$  \_\_\_\_\_

$9 \times 1 = 9$  \_\_\_\_\_

$1 \times 9 = 9$  \_\_\_\_\_

$9 \div 1 = 9$  \_\_\_\_\_

$9 \div 9 = 1$  \_\_\_\_\_

$10 \times 1 = 10$  \_\_\_\_\_

$1 \times 10 = 10$  \_\_\_\_\_

$10 \div 1 = 10$  \_\_\_\_\_

$10 \div 10 = 1$  \_\_\_\_\_

What happens when you multiply by 1? Why? Divide by 1? Why? How do you know when 1 will be the quotient?

When you multiply by 1, you get the factor you started with because you are finding one group of that factor.

When you divide by 1, you get the factor you started with because you are finding out how many groups of 1 are in the factor.

You know that 1 will be the quotient when you divide a number by itself. (except 0!)

# Fives

In each set of four lines below:  
Write a fives multiplication fact.

Write its turnaround fact.

Then, write two division facts that are related.

$0 \times 5 = 0$  \_\_\_\_\_

$5 \times 0 = 0$  \_\_\_\_\_

$0 \div 5 = 0$  \_\_\_\_\_

\_\_\_\_\_

$1 \times 5 = 5$  \_\_\_\_\_

$5 \times 1 = 5$  \_\_\_\_\_

$5 \div 5 = 1$  \_\_\_\_\_

$5 \div 1 = 5$  \_\_\_\_\_

$2 \times 5 = 10$  \_\_\_\_\_

$5 \times 2 = 10$  \_\_\_\_\_

$10 \div 5 = 2$  \_\_\_\_\_

$10 \div 2 = 5$  \_\_\_\_\_

$3 \times 5 = 15$  \_\_\_\_\_

$5 \times 3 = 15$  \_\_\_\_\_

$15 \div 5 = 3$  \_\_\_\_\_

$15 \div 3 = 5$  \_\_\_\_\_

$4 \times 5 = 20$  \_\_\_\_\_

$5 \times 4 = 20$  \_\_\_\_\_

$20 \div 5 = 4$  \_\_\_\_\_

$20 \div 4 = 5$  \_\_\_\_\_

$5 \times 5 = 25$  \_\_\_\_\_

\_\_\_\_\_

$25 \div 5 = 5$  \_\_\_\_\_

\_\_\_\_\_

$6 \times 5 = 30$  \_\_\_\_\_

$5 \times 6 = 30$  \_\_\_\_\_

$30 \div 5 = 6$  \_\_\_\_\_

$30 \div 6 = 5$  \_\_\_\_\_

$7 \times 5 = 35$  \_\_\_\_\_

$5 \times 7 = 35$  \_\_\_\_\_

$35 \div 5 = 7$  \_\_\_\_\_

$35 \div 7 = 5$  \_\_\_\_\_

$8 \times 5 = 40$  \_\_\_\_\_

$5 \times 8 = 40$  \_\_\_\_\_

$40 \div 5 = 8$  \_\_\_\_\_

$40 \div 8 = 5$  \_\_\_\_\_

$9 \times 5 = 45$  \_\_\_\_\_

$5 \times 9 = 45$  \_\_\_\_\_

$45 \div 5 = 9$  \_\_\_\_\_

$45 \div 9 = 5$  \_\_\_\_\_

$10 \times 5 = 50$  \_\_\_\_\_

$5 \times 10 = 50$  \_\_\_\_\_

$50 \div 5 = 10$  \_\_\_\_\_

$50 \div 10 = 5$  \_\_\_\_\_

What do you notice about the last digit in each of the products above?

The last digit in each product is either 0 or 5.

How can you find a multiple of 5 if you know the multiple of 10?

The multiples of 5 are half of the multiples of 10. For example,  $5 \times 2$  is 10, which is half of  $10 \times 2$ , or 20. (This is because 5 is half of 10.)

# Nines

Write the nines fact that you can find by knowing each tens fact below.  
Use turnaround facts also.

Then, write two division facts that are related.

$1 \times 10 = 10$

$1 \times 9 = 9$  \_\_\_\_\_

$9 \times 1 = 9$  \_\_\_\_\_

$9 \div 9 = 1$  \_\_\_\_\_

$9 \div 1 = 9$  \_\_\_\_\_

$2 \times 10 = 20$

$2 \times 9 = 18$  \_\_\_\_\_

$9 \times 2 = 18$  \_\_\_\_\_

$18 \div 9 = 2$  \_\_\_\_\_

$18 \div 2 = 9$  \_\_\_\_\_

$3 \times 10 = 30$

$3 \times 9 = 27$  \_\_\_\_\_

$9 \times 3 = 27$  \_\_\_\_\_

$27 \div 9 = 3$  \_\_\_\_\_

$27 \div 3 = 9$  \_\_\_\_\_

$4 \times 10 = 40$

$4 \times 9 = 36$  \_\_\_\_\_

$9 \times 4 = 36$  \_\_\_\_\_

$36 \div 9 = 4$  \_\_\_\_\_

$36 \div 4 = 9$  \_\_\_\_\_

$5 \times 10 = 50$

$5 \times 9 = 45$  \_\_\_\_\_

$9 \times 5 = 45$  \_\_\_\_\_

$45 \div 9 = 5$  \_\_\_\_\_

$45 \div 5 = 9$  \_\_\_\_\_

$6 \times 10 = 60$

$6 \times 9 = 54$  \_\_\_\_\_

$9 \times 6 = 54$  \_\_\_\_\_

$54 \div 9 = 6$  \_\_\_\_\_

$54 \div 6 = 9$  \_\_\_\_\_

$7 \times 10 = 70$   $7 \times 9 = 63$  \_\_\_\_\_

$63 \div 9 = 7$  \_\_\_\_\_

$9 \times 7 = 63$  \_\_\_\_\_

$63 \div 7 = 9$  \_\_\_\_\_

$8 \times 10 = 80$   $8 \times 9 = 72$  \_\_\_\_\_

$72 \div 9 = 8$  \_\_\_\_\_

$9 \times 8 = 72$  \_\_\_\_\_

$72 \div 8 = 9$  \_\_\_\_\_

$9 \times 10 = 90$   $9 \times 9 = 81$  \_\_\_\_\_

$81 \div 9 = 9$  \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

$10 \times 10 = 100$   $10 \times 9 = 90$  \_\_\_\_\_

$90 \div 9 = 10$  \_\_\_\_\_

$9 \times 10 = 90$  \_\_\_\_\_

$90 \div 10 = 9$  \_\_\_\_\_

How can you find a multiple of 9 if you know the multiple of 10?

When you multiply a factor by 10, take one set of this factor away from the multiple of 10, and you will get the multiple of 9. ( $7 \times 9$  is  $7 \times 10$ , minus 7.)

# Squares

Write each squares multiplication fact and the division fact that matches it.

$0 \times 0 = 0$  \_\_\_\_\_

\_\_\_\_\_

$1 \times 1 = 1$  \_\_\_\_\_

$1 \div 1 = 1$  \_\_\_\_\_

$2 \times 2 = 4$  \_\_\_\_\_

$4 \div 2 = 2$  \_\_\_\_\_

$3 \times 3 = 9$  \_\_\_\_\_

$9 \div 3 = 3$  \_\_\_\_\_

$4 \times 4 = 16$  \_\_\_\_\_

$16 \div 4 = 4$  \_\_\_\_\_

$5 \times 5 = 25$  \_\_\_\_\_

$25 \div 5 = 5$  \_\_\_\_\_

$6 \times 6 = 36$  \_\_\_\_\_

$36 \div 6 = 6$  \_\_\_\_\_

$7 \times 7 = 49$  \_\_\_\_\_

$49 \div 7 = 7$  \_\_\_\_\_

$8 \times 8 = 64$  \_\_\_\_\_

$64 \div 8 = 8$  \_\_\_\_\_

$9 \times 9 = 81$  \_\_\_\_\_

$81 \div 9 = 9$  \_\_\_\_\_

$10 \times 10 = 100$  \_\_\_\_\_

$100 \div 10 = 10$  \_\_\_\_\_

Draw arrays to represent two of the multiplication facts above.

(answers will vary, but the arrays should be squares)

What do you notice about the length and width of each array?

The length and width of each array are equal.

## Doubles and one more set: Threes

Write the threes fact that you can find by knowing each doubles fact below.  
Use turnaround facts also.

Then, write two division facts that are related.

$1 \times 2 = 2$

$1 \times 3 = 3$  \_\_\_\_\_

$3 \times 1 = 3$  \_\_\_\_\_

$3 \div 3 = 1$  \_\_\_\_\_

$3 \div 1 = 3$  \_\_\_\_\_

$2 \times 2 = 4$

$2 \times 3 = 6$  \_\_\_\_\_

$3 \times 2 = 6$  \_\_\_\_\_

$6 \div 3 = 2$  \_\_\_\_\_

$6 \div 2 = 3$  \_\_\_\_\_

$3 \times 2 = 6$

$3 \times 3 = 9$  \_\_\_\_\_

\_\_\_\_\_

$9 \div 3 = 3$  \_\_\_\_\_

\_\_\_\_\_

$4 \times 2 = 8$

$4 \times 3 = 12$  \_\_\_\_\_

$3 \times 4 = 12$  \_\_\_\_\_

$12 \div 3 = 4$  \_\_\_\_\_

$12 \div 4 = 3$  \_\_\_\_\_

$5 \times 2 = 10$

$5 \times 3 = 15$  \_\_\_\_\_

$3 \times 5 = 15$  \_\_\_\_\_

$15 \div 3 = 5$  \_\_\_\_\_

$15 \div 5 = 3$  \_\_\_\_\_

$6 \times 2 = 12$

$6 \times 3 = 18$  \_\_\_\_\_

$3 \times 6 = 18$  \_\_\_\_\_

$18 \div 3 = 6$  \_\_\_\_\_

$18 \div 6 = 3$  \_\_\_\_\_

$7 \times 2 = 14$

$7 \times 3 = 21$  \_\_\_\_\_

$3 \times 7 = 21$  \_\_\_\_\_

$21 \div 3 = 7$  \_\_\_\_\_

$21 \div 7 = 3$  \_\_\_\_\_

$8 \times 2 = 16$

$8 \times 3 = 24$  \_\_\_\_\_

$3 \times 8 = 24$  \_\_\_\_\_

$24 \div 3 = 8$  \_\_\_\_\_

$24 \div 8 = 3$  \_\_\_\_\_

$9 \times 2 = 18$

$9 \times 3 = 27$  \_\_\_\_\_

$3 \times 9 = 27$  \_\_\_\_\_

$27 \div 3 = 9$  \_\_\_\_\_

$27 \div 9 = 3$  \_\_\_\_\_

$10 \times 2 = 20$

$10 \times 3 = 30$  \_\_\_\_\_

$3 \times 10 = 30$  \_\_\_\_\_

$30 \div 3 = 10$  \_\_\_\_\_

$30 \div 10 = 3$  \_\_\_\_\_

How can you find a multiple of 3 if you know the multiple of 2? It might help to draw an array to explain.

If you know a multiple of 2, you can add one more set of the factor (not 3) to it to get the multiple of 3. For instance,  $5 \times 2 = 10$ , so  $5 \times 3 = 15$ , which is  $10 + 5$ .

(Student might draw a  $2 \times 5$  array and a  $3 \times 5$  array and note that there is one extra set of 5 in the second one.)

## Squares and one more set

Write the squares and one more set fact that you can find by knowing each squares fact below. Use turnaround facts also. Then, write two division facts that are related.

$1 \times 1 = 1$

$1 \times 2 = 2$  \_\_\_\_\_

$2 \times 1 = 2$  \_\_\_\_\_

$2 \div 2 = 1$  \_\_\_\_\_

$2 \div 1 = 2$  \_\_\_\_\_

$2 \times 2 = 4$

$2 \times 3 = 6$  \_\_\_\_\_

$3 \times 2 = 6$  \_\_\_\_\_

$6 \div 3 = 2$  \_\_\_\_\_

$6 \div 2 = 3$  \_\_\_\_\_

$3 \times 3 = 9$

$3 \times 4 = 12$  \_\_\_\_\_

$4 \times 3 = 12$  \_\_\_\_\_

$12 \div 4 = 3$  \_\_\_\_\_

$12 \div 3 = 4$  \_\_\_\_\_

$4 \times 4 = 16$

$4 \times 5 = 20$  \_\_\_\_\_

$5 \times 4 = 20$  \_\_\_\_\_

$20 \div 5 = 4$  \_\_\_\_\_

$20 \div 4 = 5$  \_\_\_\_\_

$5 \times 5 = 25$

$5 \times 6 = 30$  \_\_\_\_\_

$6 \times 5 = 30$  \_\_\_\_\_

$30 \div 6 = 5$  \_\_\_\_\_

$30 \div 5 = 6$  \_\_\_\_\_

$6 \times 6 = 36$

$6 \times 7 = 42$  \_\_\_\_\_

$7 \times 6 = 42$  \_\_\_\_\_

$42 \div 7 = 6$  \_\_\_\_\_

$42 \div 6 = 7$  \_\_\_\_\_

$7 \times 7 = 49$

$7 \times 8 = 56$  \_\_\_\_\_

$8 \times 7 = 56$  \_\_\_\_\_

$56 \div 8 = 7$  \_\_\_\_\_

$56 \div 7 = 8$  \_\_\_\_\_

$8 \times 8 = 64$

$8 \times 9 = 72$  \_\_\_\_\_

$9 \times 8 = 72$  \_\_\_\_\_

$72 \div 9 = 8$  \_\_\_\_\_

$72 \div 8 = 9$  \_\_\_\_\_

$9 \times 9 = 81$

$9 \times 10 = 90$  \_\_\_\_\_

$10 \times 9 = 90$  \_\_\_\_\_

$90 \div 10 = 9$  \_\_\_\_\_

$90 \div 9 = 10$  \_\_\_\_\_

$10 \times 10 = 100$

$10 \times 11 = 110$  \_\_\_\_\_

$11 \times 10 = 110$  \_\_\_\_\_

$110 \div 11 = 10$  \_\_\_\_\_

$110 \div 10 = 11$  \_\_\_\_\_

Draw an array of one of the squares facts and an array of the squares and one more set fact that matches it. What is the same and different about the two arrays?

(Answers will vary, but students should draw two arrays, where one array is a square, and the other is the square plus one extra row or column.)

The arrays have the same number of rows (or columns), but the second array has one extra column (or row).

## Doubles doubled: fours

Write the fours fact that you can find by knowing each doubles fact below.  
Use turnaround facts also.

Then, write two division facts that are related.

$1 \times 2 = 2$

$1 \times 4 = 4$  \_\_\_\_\_

$4 \times 1 = 4$  \_\_\_\_\_

$4 \div 4 = 1$  \_\_\_\_\_

$4 \div 1 = 4$  \_\_\_\_\_

$2 \times 2 = 4$

$2 \times 4 = 8$  \_\_\_\_\_

$4 \times 2 = 8$  \_\_\_\_\_

$8 \div 4 = 2$  \_\_\_\_\_

$8 \div 2 = 4$  \_\_\_\_\_

$3 \times 2 = 6$

$3 \times 4 = 12$  \_\_\_\_\_

$4 \times 3 = 12$  \_\_\_\_\_

$12 \div 4 = 3$  \_\_\_\_\_

$12 \div 3 = 4$  \_\_\_\_\_

$4 \times 2 = 8$

$4 \times 4 = 16$  \_\_\_\_\_

\_\_\_\_\_

$16 \div 4 = 4$  \_\_\_\_\_

\_\_\_\_\_

$5 \times 2 = 10$

$5 \times 4 = 20$  \_\_\_\_\_

$4 \times 5 = 20$  \_\_\_\_\_

$20 \div 4 = 5$  \_\_\_\_\_

$20 \div 5 = 4$  \_\_\_\_\_

$6 \times 2 = 12$

$6 \times 4 = 24$  \_\_\_\_\_

$4 \times 6 = 24$  \_\_\_\_\_

$24 \div 4 = 6$  \_\_\_\_\_

$24 \div 6 = 4$  \_\_\_\_\_

$7 \times 2 = 14$

$7 \times 4 = 28$  \_\_\_\_\_

$4 \times 7 = 28$  \_\_\_\_\_

$28 \div 4 = 7$  \_\_\_\_\_

$28 \div 7 = 4$  \_\_\_\_\_

$8 \times 2 = 16$

$8 \times 4 = 32$  \_\_\_\_\_

$4 \times 8 = 32$  \_\_\_\_\_

$32 \div 4 = 8$  \_\_\_\_\_

$32 \div 8 = 4$  \_\_\_\_\_

$9 \times 2 = 18$

$9 \times 4 = 36$  \_\_\_\_\_

$4 \times 9 = 36$  \_\_\_\_\_

$36 \div 4 = 9$  \_\_\_\_\_

$36 \div 9 = 4$  \_\_\_\_\_

$10 \times 2 = 20$

$10 \times 4 = 40$  \_\_\_\_\_

$4 \times 10 = 40$  \_\_\_\_\_

$40 \div 4 = 10$  \_\_\_\_\_

$40 \div 10 = 4$  \_\_\_\_\_

How can you find a multiple of 4 if you know the multiple of 2? It might help to draw an array to explain.

If you know a multiple of 2, you can just double it to get the multiple of 4.

(Student might draw an array that has 2 rows or columns and then double it to get 4 rows or columns.)

## Two apart facts

Write the two apart fact that you can find by knowing each squares fact below. Use turnaround facts also.

Then, write two division facts that are related.

$1 \times 1 = 1$

$0 \times 2 = 0$  \_\_\_\_\_

$2 \times 0 = 0$  \_\_\_\_\_

$0 \div 2 = 0$  \_\_\_\_\_

\_\_\_\_\_

$2 \times 2 = 4$

$1 \times 3 = 3$  \_\_\_\_\_

$3 \times 1 = 3$  \_\_\_\_\_

$3 \div 3 = 1$  \_\_\_\_\_

$3 \div 1 = 3$  \_\_\_\_\_

$3 \times 3 = 9$

$2 \times 4 = 8$  \_\_\_\_\_

$4 \times 2 = 8$  \_\_\_\_\_

$8 \div 4 = 2$  \_\_\_\_\_

$8 \div 2 = 4$  \_\_\_\_\_

$4 \times 4 = 16$

$3 \times 5 = 15$  \_\_\_\_\_

$5 \times 3 = 15$  \_\_\_\_\_

$15 \div 5 = 3$  \_\_\_\_\_

$15 \div 3 = 5$  \_\_\_\_\_

$5 \times 5 = 25$

$4 \times 6 = 24$  \_\_\_\_\_

$6 \times 4 = 24$  \_\_\_\_\_

$24 \div 6 = 4$  \_\_\_\_\_

$24 \div 4 = 6$  \_\_\_\_\_

$6 \times 6 = 36$

$5 \times 7 = 35$  \_\_\_\_\_

$7 \times 5 = 35$  \_\_\_\_\_

$35 \div 7 = 5$  \_\_\_\_\_

$35 \div 5 = 7$  \_\_\_\_\_

$7 \times 7 = 49$

$6 \times 8 = 48$  \_\_\_\_\_

$8 \times 6 = 48$  \_\_\_\_\_

$48 \div 8 = 6$  \_\_\_\_\_

$48 \div 6 = 8$  \_\_\_\_\_

$8 \times 8 = 64$

$7 \times 9 = 63$  \_\_\_\_\_

$9 \times 7 = 63$  \_\_\_\_\_

$63 \div 9 = 7$  \_\_\_\_\_

$63 \div 7 = 9$  \_\_\_\_\_

$9 \times 9 = 81$

$8 \times 10 = 80$  \_\_\_\_\_

$10 \times 8 = 80$  \_\_\_\_\_

$80 \div 10 = 8$  \_\_\_\_\_

$80 \div 8 = 10$  \_\_\_\_\_

$10 \times 10 = 100$

$9 \times 11 = 99$  \_\_\_\_\_

$11 \times 9 = 99$  \_\_\_\_\_

$99 \div 11 = 9$  \_\_\_\_\_

$99 \div 9 = 11$  \_\_\_\_\_

Draw an array of one of the squares facts and an array of the two apart fact that matches it. How are the two arrays related?

(Answers will vary, but student should draw a square array and the matching two apart array.)

The two apart array has one more row (or column) and one less column (or row) than the square array. It has 1 less square (or unit) than the square array.

How can you find the product for a two apart fact if you know the squares?

Take the number in between the two factors; square it, and subtract 1.
