CIRCLE THE CLUE WORDS IN EACH EXCERPT THAT HELP YOU IDENTIFY.**

Organizational Pattern Letter to Potential Employer
Purpose: To convince them to hire Ms. Henry as a Teacher

Dear Hershey School for Troubled Students,

I appreciate the time out of your busy schedule to see me today. I just wanted to take a moment to remind you of the impact I could have at your school. If you hire me, your school will be a stronger learning environment. With my understanding of how students learn, I will be able to create a classroom that welcomes students and fellow teachers in order to improve test scores at your school. In order to make positive changes in the lives of your students, make the right decision and hire me.

Organizational Pattern Speech to Council for Education
Purpose: To convince them to choose Mr. Duncan for Teacher of the Year

Thank you for having me here tonight. I believe that of all the teachers you have to choose from, Mr. Duncan is the best choice. These other teachers are good, but Mr. Duncan is great! When he talks, kids don't just listen, they learn. Other teachers just worry about covering their content, getting through the book. But, Mr. Duncan, he wants you to realize all of the cool stuff that happened throughout history and learn from it so that you'll be a good citizen of your own country someday.

Organizational Pattern Speech by Mrs. Hutchison to US Senate Floor
Purpose: To persuade them to pass stronger environmental laws

Thank you for having me here today. Let's get right down to business. You must pass these laws for stronger environmental laws due the impact on the environment causing global warming. In 1985, we saw the first documented secondary impact of global warming when the measurements of the polar ice caps showed melting beyond belief. Then, in 1995 our temperature mapping showed continued rising of annual averages globally. Now, as recently as the 2007 winter season we saw unseasonably warm weather yet again and wet weather. These trends prove our impact on the environment is causing more damage than we can control.
