

## The Monkey Blood Murder Case

By Mrs. Shaw and Dr. Schweig's ELS class

The man reached down and touched the pool of blood and brought it to his face to **examine** it. Then he **applied** the blood to a capsule and brought it back to the investigation center. He **inherited** his detective skills from his father. The blood was **ideal** because it had a new disease. So he **assigned** a special disease investigator. Then he felt a monkey **strike** him on the head and then the monkey took his job. The monkey did not have a **permit** to investigate. The monkey was **disguised** as a detective. The monkey was so **satisfied** that he ate a banana. The real murderer hid in the **attic** of somebody's house. The monkey's mom gave him a permit to see the concert of **System** of a Down. At the concert the monkey reached his **limit** and died. The murderer took an **item** from the house and killed the monkey's mother. The death of the rock n roll monkey and his mother was in the district news. When the emperor of the **empire** heard of the deaths he went to the site. Everyone was **required** to come to the monkey's funeral. Wax models of the monkey were put in the **exhibit** of the CSI museum. The murderer **considered** hiring a bounty hunter to kill the emperor. The murderer was caught and was **confined** to life behind bars. I'm sorry, but we will **classify** the rest of this case as FBI information.
